### **China abolishes import VAT on gold contained in copper blister**

China State Council approved to abolish the import value added tax on gold contained in copper blister, effective since November 1, 2009. China is highly dependant on copper resources import about 70%. Thus China Customs abolished the gold VAT of copper concentrate import since May 12, 2003 to support copper industry. However, affected by the financial crisis, copper producers were trapped again by the plummeting price. Raw materials were in short supply. Hence the gold VAT contained in copper blister was suggested to be canceled in early 2009.

This policy is no doubt good news for domestic copper producers.

1. It is helpful for copper producers to enlarge the purchasing channels of raw materials. In the first half of 2009, copper scraps supply declined sharply, which affected the refined copper production. As a result, enterprises had to purchase at high price to meet the need of production. Import of copper blister will ease the tight supply of raw material.

2. Production cost will be further saved. China imported 197kt of unrefined copper in 2008, and it is expected to be 230kt in 2009. 50-75g of gold is contained in each tonne of copper. Thus 11.5-17t of gold could be produced from the imported blister, and 350-550 million yuan tax could be saved.

3. More overseas mineral resources will be used in domestic production. Jiangxi Copper Group collaborated with China Metallurgical Group and China Minmetals for Aynak Copper Mine in Afghanistan and North Peru Copper. It is able to smelt ore into blister and import to the mainland. Cost is

obviously saved than import copper concentrate only.

4. It will be also helpful for smelting enterprises to win more talking right at TC/RC negotiation. After outbreak of the financial crisis, domestic raw material inventories of copper concentrate fell sharply. As the copper consumption rebounded in the second quarter of 2009, supply of concentrate became very tight. Then domestic producers imported large amount of concentrate, and the spot TC/RC fell quickly to 10 US\$ per tonne/10 cents per pound. Now producers could get raw material in different ways. Therefore, it will support the 2010 TC/RC negotiation at the end of the year.

Propelled by the policy, it is expected the copper blister import will increase in 2010. However, the international supply of blister is inclined to be tight. The real import next year is still need to be watched.

## Macro Economy

**China's industrial output** is expected to grow by about 16 percent year on year this month and in December and the full year industrial output growth could reach around 10.5 percent, Minister of Industry and Information Technology Li Yizhong said on Nov.14.

**China's consumer price index (CPI)**, a main gauge of inflation, dipped 0.5 percent year on year in October, the National Bureau of Statistics (NBS) said on Nov.11. The rate of decline was 0.3 percentage points lower than that in September.

**The producer price index (PPI)**, a major measure of inflation at the wholesale level, dropped 5.8 percent in October from a year earlier, according to the NBS. The rate of decline was 1.2 percentage points lower than that in September.

### Copper price keeps on rising

Copper for three month delivery on the LME opened at US\$6,318/t on Nov.2, closed at US\$6,855/t on Nov.27, hitting US\$7,055/t on Nov.26 and that on the SHFE opened at 50,430yuan/t, closed at 53,520yuan/t, touching a high of 55,500yuan/t on Nov.26.

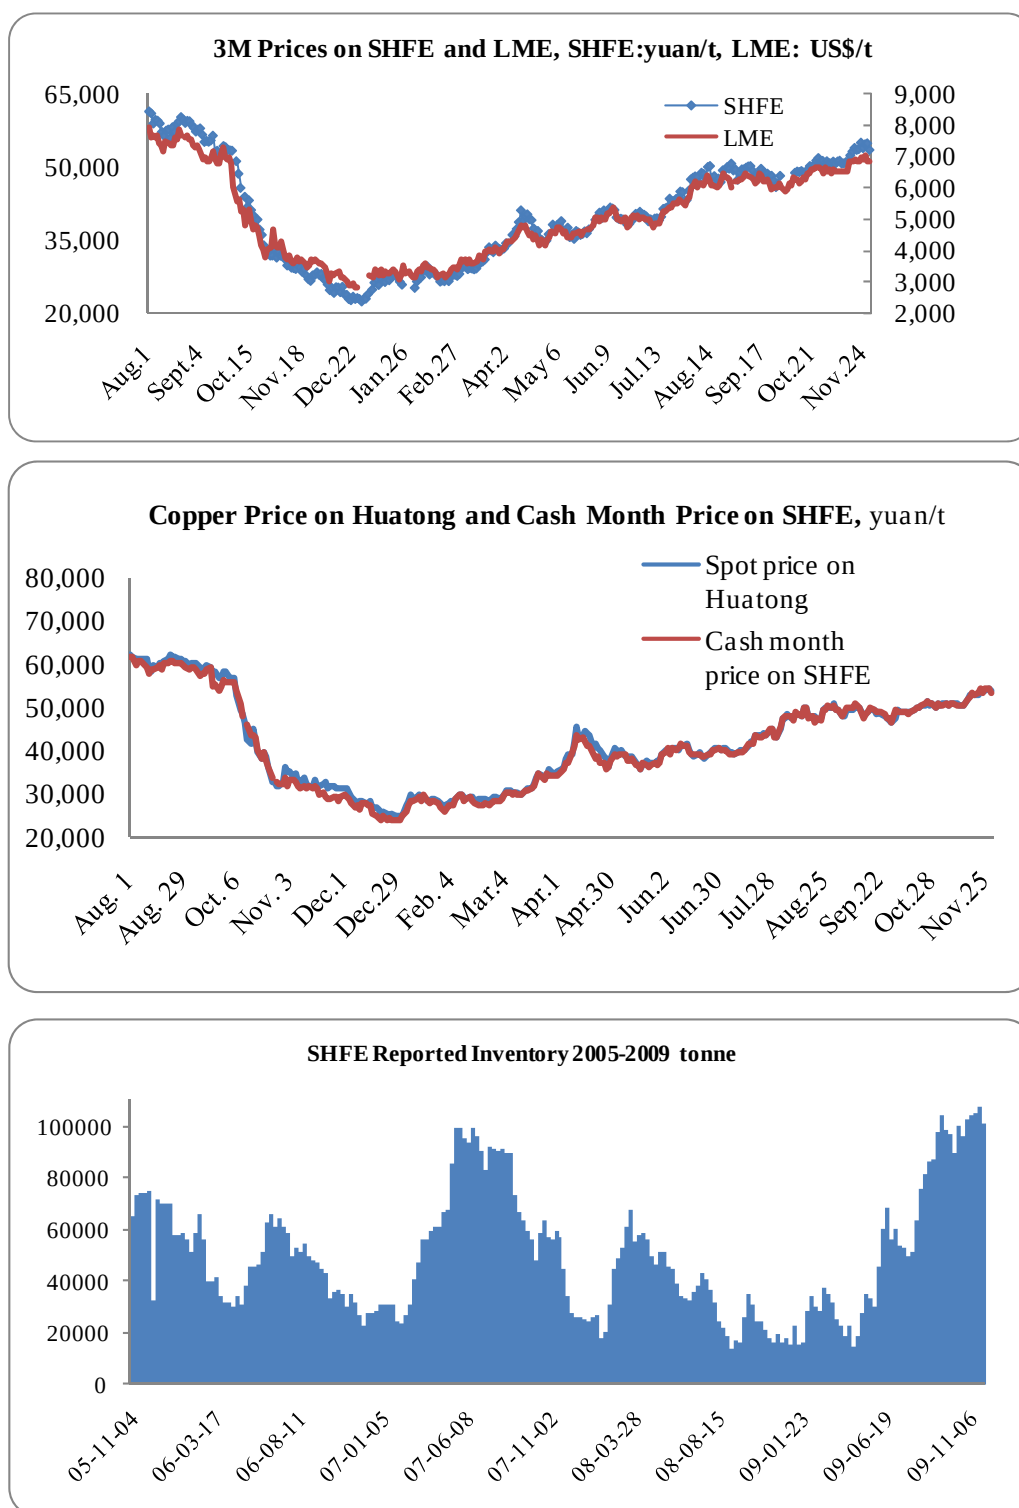

Affected by the performance of US dollar, US economy and climbing up inventory, copper prices fluctuated in early Nov. In the rest days, with capital flowing into the market, increasing open interest and strikes in several regions, copper price found support, in late Nov., it setting a year-to-date high of US\$7,055/t.

By Nov.27, the inventory on the LME warehouses was 435,075t, up by more than 60% since this mid-July, the volume of cancelled warrants was less than 2,000t, which indicated the demand (excluding China) was still gloomy. While in China the SHFE monitored inventory was staying high at more than 100kt since Nov. The big inventory on LME and SHFE restricted the rebounding of copper price.

The miners in Spence Mine has not ended since they started in Oct. This month, a strike over wages by workers at Zambia's Konkola Copper Mines (KCM), a unit of London-listed Vedanta Resources, started. Workers in other copper mines are likely to strike. The news on strikes are supportive to copper price. If some strikes will continue, copper price is easy to stand above US\$7,000/t.

Although the fundamentals are still weak at the moment, people are worried about the over-performance of copper price, copper price is tending to climb up further. Investors are optimistic

over the economy next year. So we estimate copper price might go higher in early Dec. before falling back resulted from profit-taking by investors in Christmas holiday and New Year holiday.

## Refined production continues the growth

Statistics released by China Nonferrous Metals Industry Association (CNIA) show the refined copper production was 377,742t in October, slightly up by 0.81% over the previous month or 25.63% over the same month last year. The accumulative output reached 3.378 mln tonnes in the first ten months.

After Antaiko adjustment, the total output was 3.36 mln tonnes. The utilization rate of copper refining facilities continues to rise. Secondary copper production is in the way of gradually bouncing. In the whole year, the secondary production is expected to reach about 34% of total refined production. Smelters say they are trying the utmost efforts to complete the annual target. We estimate the production in the last two months will remain at high level.

Source: NBS

China produced 7.12 mln t of copper fabricated products in the first ten months this year, CNIA statistics show. Ms. Wan Jun, senior analyst with Antaike says the output of fabricated products will be more than 8.0mln t for the whole year, including 1.4 mln t sheet and strip, 1.45 mln t tube, 3.75 mln t wire and 1.4 mln t other products.

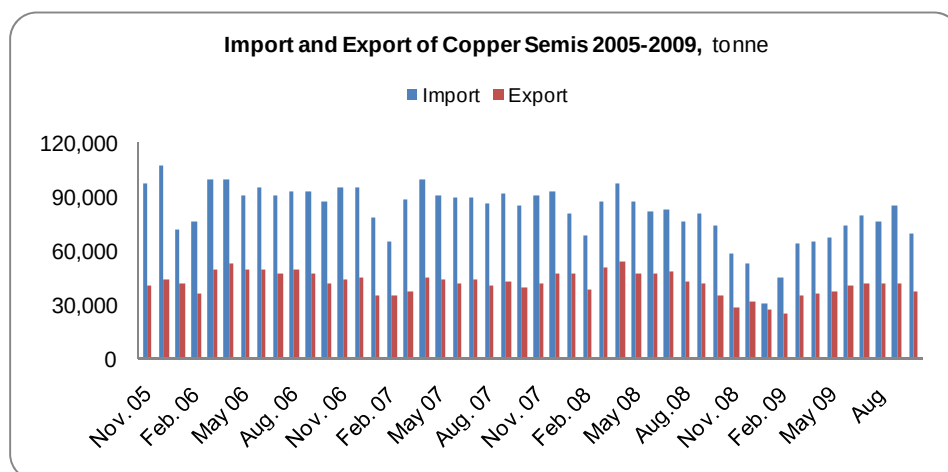

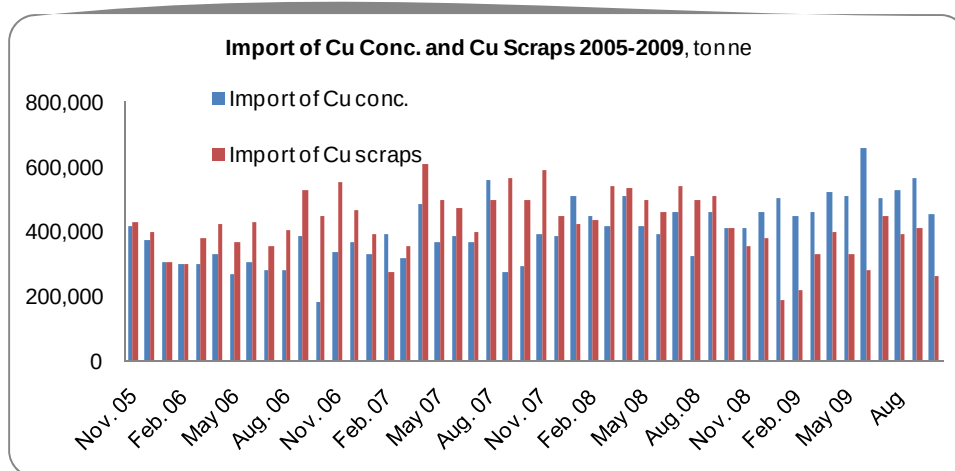

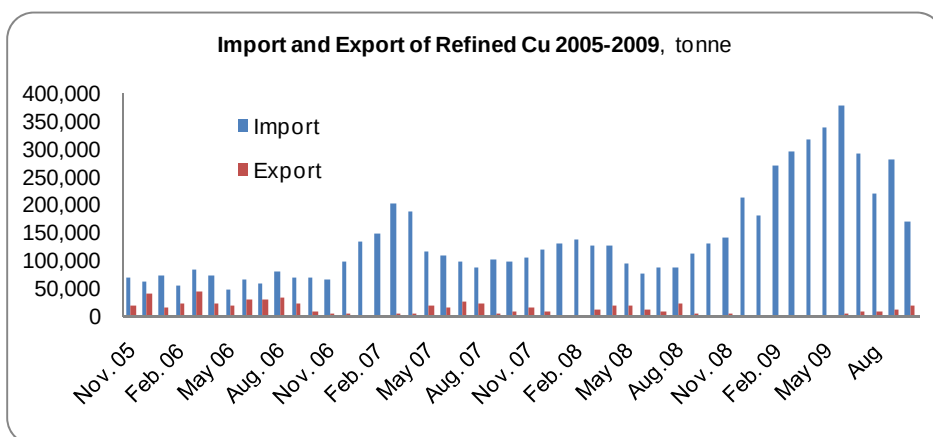

The statistics released by NBS showed the output of major copper-using products saw various growths except communication cable that experienced more than 30% fall, compared to the same period last year. But compared that in the previous month, the output of all products declined, with power generating equipments, refrigerator, and freezer slipping by double-digit. One of the reasons is the influence from the National Day Holiday. But it is the reflection of not strong demand in China. The Chinese market is still in huge surplus.

### Refined import falls back to 169kt

The data released by the Chinese Customs on showed the refined import in October fell by 40.1% M-o-M to 169kt, but still up by 31.4% y-o-y. The volume is in the high level on a monthly basis. The accumulative import in the first ten months was 2.75mln t. The huge surplus on domestic market gave strike to import enthusiasm. It is said some importers cancelled or delayed the shipment in October. The arbitrage opportunities between SHFE and LME has disappeared, it is not profitable to import the red metal.

In terms of the raw materials, the import of copper concentrate, copper blister, copper anode and copper scraps slid down, compared with that in the previous month. The import of copper concentrate was only 262kt, seeing large fall, compared with around 400kt in August and September. The domestic price is much lower than international price, which pushed importers to reduce the buying of copper scrap. In the meanwhile, demand from downstream users was bleak, which was also a factor affecting import of copper scrap.

We estimate the import of refined copper in the last two months and next year will turn to normal level.

## Nickel Market Commentary

### Price spread narrowed at LME and domestic market

As a whole, nickel price went soft in November. LME nickel moved down vibrantly in November. However, Chinese nickel still went flat. Price difference between LME market and domestic market narrowed. By the end of this month, the prices at the two markets were nearly the same about 128,000 yuan/t. Fundamentals were not seen to be better and LME nickel market price was mainly led by the trend of exchange of US dollars.

In November, the highest nickel price on Shanghai Changjiang spot market was 133,200 yuan/t, and the lowest was 126,500 yuan/t. The average price in the month was 128,425 yuan/t, down 4.1% m-o-m.

Source: Antaike

Jinchuan Group Ltd (JNMC) adjusted its ex-factory price of refined nickel twice in November. Chinese domestic nickel price continues to be flat. In the middle of October, spot nickel price kept at around 133,000-135,000 yuan/t. Then it drifted down at the end of October and early this month. On November 3, spot nickel price decreased to 129,500 yuan/t at Shanghai Changjiang Market. There is no good sign from stainless steel industry. Then nickel price continued to move down slowly to 127,000 yuan/t at the end of the month.

Now the nickel supply at market mainly comes from Jinchuan Group. Its price is similar to Russia nickel and most end users are inclined to buy Jinchuan's nickel.

| JNMC's offer of nickel ex-factory price since October 2009 (yuan/t): |         |         |         |

Sources: JNMC

### Low grade NPI market looks up

Low grade nickel pig iron market experienced a hard time in the past month, but the transaction saw well turns in November. Sales increased on the spot market, and the price increased slightly to 3,050 yuan/t by the end of the month from 2,950 yuan/t in early November.

Some producers paused production for nearly a month. Some others switched to middle grade NPI

production. Now most producers are not very confident with the future market. It is estimated that the price has limited space for stepping up.

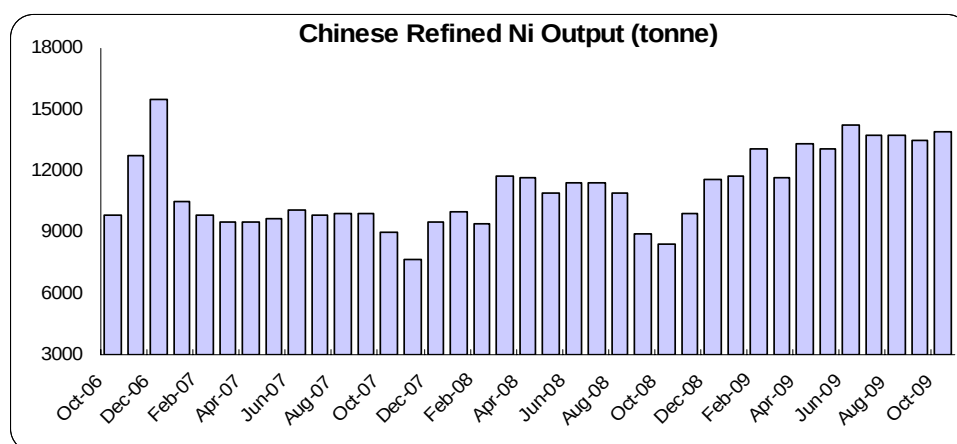

As for medium grade nickel pig iron market, the major quotation for 4-6% NPI was 1,265-1,275 yuan/mtu (the price of one percent nickel content). High grade NPI demand is stable relatively currently, and the major price is 1,170-1,250 yuan/mtu.

The reduction of production by steel plants lowered the nickel demand in Q4. Some small plants inclined to use low grade NPI and promoted its price a bit. However, market demand was still plane. Market participants consider NPI producers are likely to lower output in such sluggish demand.

### Chinese nickel output keeps stable in Oct. 2009

Chinese output of nickel was 13.9kt in October 2009, according to the data from China Nonferrous Metals Industry Association (CNIA). The total output in Jan.-Oct. was 132kt, up by 24.8% y-o-y.

Jinchuan Group Ltd (JNMC) still kept nickel output above 10kt in October. It yielded 10.4kt of electrolytic nickel during the month. In November, domestic steel makers including Tisco, Baosteel, ZPSS, Lisco and Jisco designed output was about 520kt. Stainless steel monthly output is normal to be above 500kt. In such consideration, the supply did not change a lot during the month. Some steel plants conducted maintenance like Tisco while some small plants also intended to raise output. As a whole, nickel demand will not improve in a short time.

Source: CNIA

### Price spread spurred nickel export in October

Chinese nickel export soared to 5.9kt in October, increasing by 86.3% m-o-m. Domestic nickel price kept stable in October and the price gap increased, which depressed the import while spurred export. It is forecasted that domestic market will face a long term over surplus. The status will not be eased until the second half of 2010. Importers sold nickel to LME market from warehouse in order to lower losses. As a result, LME stockpile is estimated to continue to soar to 150kt.

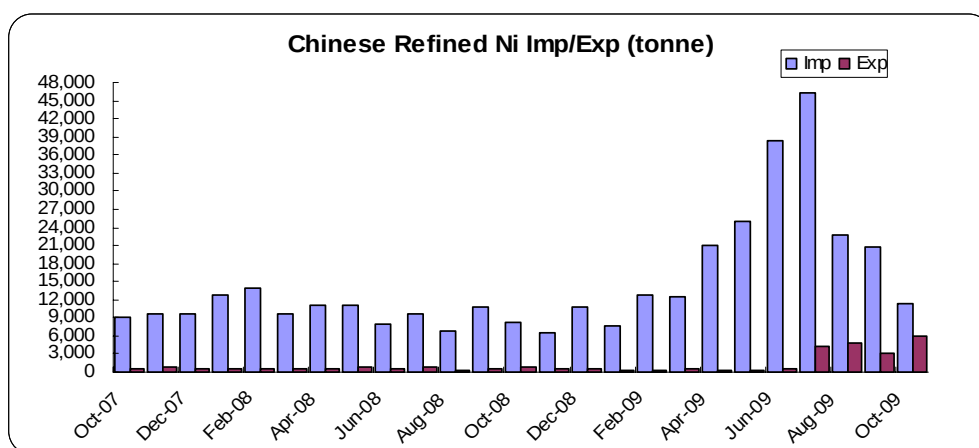

Chinese nickel import dropped by 45.4% m-o-m to 11.3kt in October. Higher imported price made it less profitable to do import. However, the total volume in Jan-Oct was also far higher than that in the corresponding time of last year. LME nickel price slip quickly in November and it is forecasted that nickel import will return to the normal level in Nov. and Dec.

### Chinese import of refined nickel by origin in October 2009

| Country   | Quantity in<br>Oct 09(kt) | Quantity in<br>Jan-Oct 09(kt) | % Jan-Oct 09/08 |

### Chinese nickel ore import down 51.8% m/m in Oct.

China imported 1.35mln tonnes of nickel ore and concentrate in October 2009, decreasing by 1.46mln tonnes compared with the former month. The total import was 13.22mlnt, up by 18.8% y/y.

Currently, it is in the rain season in Southeast Asia. It is difficult to conduct nickel ore mining and transportation. In addition, Chinese domestic demand is also weak and most FeNi producers hold large stockpile. Some traders expressed the ocean freight also rose due to the weather conditions and they were considering stopping nickel ore trading until March next year.

## Copper News

### **CNIA: Chinese copper semis output will rebound in Q4 2009**

The analyst of China Nonferrous Metals Association (CNIA) estimates that the consumption season is coming soon, the operating rate of copper rod, copper tube and copper plate processing enterprises increased obviously.

In October, the operating rate of copper wire and rod enterprises was 78.3%, up by 2.8% y-o-y. The operating rate of copper tube enterprises was 73.3%, up by 22.8% y-o-y and 14.1% m-o-m. In September, the operating rate of copper tube enterprises decreased by 59.2%.

According to the statistics of CNIA, the output of copper semis was 792kt in September, up by 5.2% m-o-m and 24.7% y-o-y. The output of copper semis was 6.27mlnt during January to September, up by 18.0% y-o-y. Meanwhile, according to the statistics of Custom, the import of copper semis was 85kt, up by 11.6% m-o-m and 5.3% y-o-y. It realized positive growth for the 1st time since March 2008.

The fourth quarter was the traditional productive peak season, driven by the growth of end using industry, e.g. home appliance and automobile etc. The copper processing products consumption will remain rapid speed.

### **12 Chinese departments jointly issue “Circular on promoting the rectifying Mineral Resources”**

In order to promote mineral resources rectifying work and minerals development, the State Council, the Ministry of Land and Resources, National Development and Reform Commission, Ministry of Industry and Information Technology, the Ministry of Public Security, Ministry of Supervision, Ministry of Finance, Ministry of Environmental Protection, Ministry of Commerce, State Administration for Industry & Commerce, State Administration of Work Safety, Ministry of Energy, and State Administration of Coal Mine Safety jointly issued “Circular on promoting the rectifying Mineral Resources” recently, the notice pointed that by the end of 2010, the whole country should finish the work and establish a sound mineral resources management rule and a long-term exploration system.

The Circular also points that the rectifying mineral resources are coal, iron, manganese, copper, aluminum, molybdenum, gold, tin, tungsten, stadium, rare earth, phosphorus and sylivine etc.

The target of this integration work is that mineral resources exploration layout is optimized and enlarged and the environment of mine safety work is promoted.

Before March 2009, all the provinces, cities and municipalities should establish rectifying scheme and since 2011, the integration work should shift to regular management.

### **Chambishi Cu project commissioned on**

Chambishi Copper Smelter Co., Ltd (Chambishi Cu smelter) commissioned its copper project on October 19. This company was jointly

| <b>October 19</b>                                                             | <p>incorporated by China Nonferrous Metals Mining Group Co., Ltd (CNMC) and Yunnan Copper Co., Ltd, sources from the company said.</p> <p>The company has finished US\$300mln of investment. And the company will further inject US\$200mln again. It will have capacity of 250kty of copper blister and 520kty of sulfuric acid.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Hyesan Youth Copper Mine project goes well</b>                             | <p>Under the attention of the top leadership of Sino-DPRK government, the construction of Hyesan Youth Copper Mine project is going on well after 2 years construction period. The project is jointly invested by Wanxiang Group and Huizhong Mineral Industry joint Company.</p> <p>Hyesan Youth Copper Mine is located at Mount Paekdu in Hyesan City, DPRK. The reserves of the mine rank the 1st in Asia. The geological metal content above C1 level are 33.1mlnt (ore average content is 1.3%), the copper content are 420kt and the C2 level copper content are more than 1mlnt.</p> <p>Wanxiang Group was established in 1969 in Zhejiang Province. It is one of the Chinese top 500 focusing on producing automobiles spare parts.</p> <p>Huizhong Mineral Industry joint Company is jointly invested by Sino-Mining International Investment Co., Ltd and DPRK Yanggang Mining United Institute with registered capital of 44.9mln euros.</p> |
| <b>JCC obtains the exploitation right of Afghan Aynak Copper Mine</b>         | <p>Jiangxi Copper Corporation (JCC) obtained the exploitation right of Afghan Aynak Copper Mine, and the project was proved by NDRC recently, sources from the company said.</p> <p>The construction work was kicked off in Afghan Aynak Copper Mine on July 9, which was developed jointly by China Metallurgical Group Corporation (MCC) and JCC.</p> <p>The project with total investment of US\$4.3 billion would go into trial production by the end of 2011, the stage 1 would produce 180kt of copper per year and it would increased by 320kt after the stage 2 was finished.</p> <p>Aynak Copper Mine is 35km far from Kabul the capital of Afghan, and is believed to be the second copper mine undeveloped in the world. The copper resource proved is 705 mlnt @1.56% copper for 11.0 mln t copper metal, being the super-large copper deposit.</p>                                                                                         |
| <b>Jiangxi Province to achieve the target of 5mlnt of new copper reserves</b> | <p>The official of Land and Resources of Jiangxi Province announced that it would make efforts to develop mineral exploration in Jiangxi Province.</p> <p>Jiu Jiang-Rui Chang area was located in ore-forming belt of the middle and lower reaches of the Yangtze River. This area has proven many copper mines and gold mines, e.g. Mingwu Mountain, Chengmen Mountain, Yangji Mountain and Dingjia Mountain etc. The proven reserves were 4mlnt of copper and 1.76mlnt of gold. So Jiu Jiang-Rui Chang area has the important strategic position for development of Jiangxi Nonferrous Metals Industry.</p>                                                                                                                                                                                                                                                                                                                                           |

| <b>Xinjiang government injects 200mln yuan for prospecting in the south of Xinjiang</b>      | <p>Xinjiang government formulated the “Suggestion on Prospecting Mineral Resources in the south Xinjiang”. The government would inject 200mln yuan for deep prospecting during 2009-2012.</p> <p>The expected target are following: To prospect 10 large-scale deposits; To find 600mlnt of iron reserves, 7mlnt of copper reserves, 250kt of nickel reserves, 2.5mlnt of lead reserves, 90t of gold reserves and 250kt of molybdenum reserves respectively.</p>                                                                                                                                                                                                                                                                                                                                                    |
| <b>Breakthrough made in prospecting in the depth of Ashele Copper Mine</b>                   | <p>Recently, Xinjiang Ashele Copper Mine made a breakthrough in finding copper in the depth of the mine, sources from the company said.</p> <p>The average grade of Cu, Zn, S and Ag is 3.00%, 0.71%, 48.88% and 23.93g/t respectively at 516.20-587m depth of JZK1306 and the average copper grade is 5.27% at 516.20-530.00m depth of JZK1306.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>VC Group obtains two copper prospecting rights in Heilongjiang</b>                        | <p>Sino Prosper State Holdings Limited (VC Group) announced on November 12 that one subsidiary of the company obtained two copper prospecting rights in Heilongjiang Province.</p> <p>The two copper mines are located in Hulin City, Heilongjiang Province.</p> <p>VC Group was established in 2002 in HK, engaged in investing resources projects.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>The import of refined copper down by 40.1% m/m in October</b>                             | <p>According to the latest statistics from Custom, Chinese refined copper import was 169,374t in October, down by 40.1% m-o-m.</p> <p>Refined zinc import was 27,839t, refined lead import was 2,950t and refined nickel was 11,378t in October.</p> <p>Primary aluminum export was 3,175t, down by 41.18% y-o-y and primary aluminum import was 25,950t in October.</p> <p>According to the statistics from Customs in September, unwrought refined copper import was 282,828t, up by 152.11% y-o-y. Primary aluminum export was 117,004t, up by 2,370.96% y-o-y and primary aluminum export was 2,255t, down by 73.27% y-o-y.</p> <p>Furthermore, refined zinc import was 35,652t, up by 4.78%, refined lead import was 5,938t, down by 5.43% y-o-y and refined nickel import was 20,491, up by 96.385 y-o-y.</p> |
| <b>Jiangxi government issues policy to buy copper, tungsten and rare earth appropriately</b> | <p>Jiangxi government issued “Suggestion on Supporting Industry Enterprises to Develop Market and Expand Sales” on November 8, 2009.</p> <p>The suggestion indicated that the government should support enterprises to expand sales and pay more attention to support automobile, iron-steel, photovoltaic, nonferrous(copper, tungsten and rare earth), home appliances, mobile phone, LED and cement. Meanwhile the government encourages the key enterprises to buy copper, tungsten and rare earth appropriately as commercial reserve.</p>                                                                                                                                                                                                                                                                     |

**A series of nonferrous metals projects are launched in Jiangxi Province in October**

In October, a series of nonferrous metals projects were launched in Jiangxi Province, sources from the Ministry of Industry and Information Technology of Jiangxi Province.

On October 18, Jiangxi Sanmu Metals Co., Ltd's copper products processing project was launched in Dongxiang Industry Park. The project was invested by Zhejiang merchants with 300mln yuan. After the project is commissioned, it would produce 20kt of copper products per year and realize 1bln yuan of operating revenue and 95mln yuan of tax.

On October 20, Jiangxi Jinzao Resource Recycling Co., Ltd's 100ktpy refined copper project was launched in Fubei Industry Park. The project was invested by Yunnan merchants with investment of 250mln yuan. After the project is commissioned, it would realize 4bln yuan of operating revenue and 250mln yuan of tax.

**Output of base metals in Jiangxi released during Jan.-Oct.**

The output of some precious and base metals in Jiangxi Province in Jan.-Oct. 2009 was released on Oct.14.

Output of Nonferrous Metals in Jiangxi in Jan.-Oct. 2009(Unit: tonne)

| Product                 | Output in Jan.-Oct. | y-o-y chn% |
|-------------------------|---------------------|------------|
| Copper concentrates     | 170,500             | 12.7%      |
| Tungsten concentrates   | 36,100              | -11.2%     |
| Lead concentrates       | 27,400              | 8.7%       |
| Zinc concentrates       | 39,800              | 46.3%      |
| Tin concentrates        | 3,250               | 7.7%       |
| Molybdenum concentrates | 6,029               | 43.8%      |
| Ten nonferrous metals   | 808,200             | 5.0%       |
| Copper                  | 714,100             | 6.6%       |
| Lead                    | 54,800              | -22.3%     |
| Zinc                    | 14,400              | 38.3%      |
| Nickel                  | 12,968              | 70.1%      |
| Tin                     | 8,828               | -1.7%      |
| Antimony                | 3,132               | 7.6%       |
| Rare earth              | 10,052              | -15.5%     |
| Copper semis            | 1,037,300           | 19.3 %     |
| Aluminum semis          | 157,200             | 36.7%      |
| Gold                    | 22                  | 45.7%      |
| Silver                  | 1667.92             | 58.6%      |

**Jiangxi nonferrous metals industry realizes positive growth in October**

Jiangxi nonferrous metals realized total productive value of 18.37bln yuan in October, up by 19.91% y-o-y, which was the first time to realize positive growth in 2009. In October, the nonferrous metals mining & concentrating total productive value was 1.499bln yuan, up by 8.91% y-o-y and the nonferrous metals total smelting and fabricating productive value was

16.871bln yuan, up by 20.91% y-o-y.

During January to October 2009, the nonferrous metals total productive value was 135.208bln yuan, down by 18.56% y-o-y. The nonferrous metals total mining & concentrating productive value was 11.337bln yuan, down by 11.42% y-o-y and the nonferrous metals total smelting and fabricating productive value was 123.87bln yuan, down by 13.24%.

During January to October 2009, the nonferrous metals industry productive added value was 28.664bln yuan, up by 18.56% y-o-y, the nonferrous metals mining & concentrating industry added value was 4.153bln yuan and the nonferrous metals smelting and fabricating added value was 24.511bln yuan, up by 18.64% y-o-y.

**Domestic copper concentrate spot TC/RCs maintains at a low position**

Domestic copper concentrate spot TC/RCs maintained at a low position on 20-25 US\$ a tonne/2-2.5cents a pound.

TC/RCs in June was 25-30 US\$ a tonne/2.5-3 cents a pound, and TC/RCs in January was 70-80 US\$ a tonne/7-8 cents a pound. It estimated that TC/RC would be still at a low level.

Furthermore, both China and foreign side negotiated copper concentrate TC/RC in 2010. Due to the tight supply, Chinese analysts predicted that TC/RC would be 50 US\$ a tonne/5 cents a pound.

**Zijin Mining's 200ktpy copper smelting project kicks off**

Zijin Mining Group Co., Ltd (Zijin Mining)'s 200ktpy copper smelting project kicked off on November 23 in Shanghang County, Fujian Province, sources from the company said.

The infrastructure construction of the project would be finished in 2010 and it would go into trial production in June 2011.

Up to now, 23 projects with total investment of 9.363bln yuan have been launched in Shanghang County. These projects will realize productive value of 20bln yuan after they are commissioned. And the county will realize productive value of 3.2bln yuan in 2009.

**Fubang Copper's 100ktpy copper smelting project goes into trial production**

Chifeng Fubang Copper Co., Ltd (Fubang Copper)'s 100ktpy copper smelting project went into trial production in November, sources from the company said.

The project was located in Linxi County, Chifeng City. It was invested by Cosun Group (Cosun) with 1bln yuan. Construction work was started on March 15 2008. It would realize 4bln yuan of annual operation revenue and 110mln yuan of profits after it finished construction.

Cosun was established in April 1992, it mainly be engaged of studying, exploiting, manufacturing and selling.

**Hunan Valin's operates well**

Hunan Valin Wire and Cable Co., Ltd (Hunan Valin)'s copper wire cable operates well in 2009, sources from the company said.

Up to November 10, the company realized 1.01bln yuan of industrial operation revenue, 1.04bln yuan of income sales and 70mln yuan of pre-tax profit.

Hunan Valin was established in July 2003 with registered capital of 119.5mln yuan, it is an integrated company focusing on producing copper wire, cable and rod.

**10ktpy copper rod project launched in Hengfeng County**

10ktpy copper rod project was launched in Hengfeng County, Jiangxi Province on November 7. The project was invested by Wenzhou Metals Co., Ltd with total capital of 30mln yuan, sources from the company said.

The project will produce 10ktpy copper rod and realize 11mln yuan of tax when it is commissioned.

Wenzhou Metals Co., is located in Wenzhou City, Zhejiang Province, it is mainly engaged in environmental copper semis and special copper semis.

**CNMC Albetter launches 30ktpy of copper tube and 40ktpy of copper plate & strip**

Zhongse Albetter Albronze Co., Ltd (CNMC Albetter)'s 30ktpy of copper tube and 40ktpy of copper plate & strip project was launched on November 12 in Shandong Province, sources from the company said.

CNMC Albetter was established in 2001, and it was acquired by China Nonferrous Metal Mining Group Co., Ltd on September 8 2009. The company mainly works on the R & D, production and sales of air conditioning refrigeration copper pipes, high-precision copper straps and tube fittings.

**GD Group's copper tube plant commissioned successfully in Mexico**

Golden Dragon Group (GD Group)'s copper tube plant was commissioned successfully on October 27, sources from the company said.

The plant will produce 60kt of precision copper tube.

GD Group realized 17.1bln yuan of annually sales income and US\$420mln of foreign exchange. The Mexico subsidiary of Golden Dragon Group was kicked off in March 2008 and went into trial production in October 2009.

The headquarters of GD Group, located in Xinxiang, Henan, China, covers a square of 1.06 million square meters. GD group owes a capital of 3 billion RMB Yuan, 5000 employees, among which more than 1600 are professional technicians. Currently GD group has a yearly production capacity of 220,000 tonnes, including 150,000 tonnes grooved tubes. In 2005, the sales income got up to RMB 5.3 billion; making foreign exchange USD 160 million.

**Copper fabricating project to be commissioned by end-2009**

A copper fabricating project composed of copper tube and rod will come on stream by the end of this year, sources close to the situation said.

The project, with a total investment of 150 mln yuan, was launched by Jiangnan Metal Products Co., Ltd. in July this year. Now the construction is

ongoing smoothly. It is expected to be put into operation by Dec.2009. Then it will realize 1.8bln yuan of operating revenue and 80mln yuan of tax.

The project was located in Xingan County, Jiangxi Province.

**A new copper semis plant to be established in Jiangxi**

A new copper semis plant was established in Xingan County, Jiangxi Province in October 2009. It was invested by Taizhou Ruitong Metals Co., Ltd with total capital of 120mln yuan, according to sources from the local government.

The plant will be operational in January 2010. After that, it will produce 30kt of copper products each year and realize 1.5bln yuan of operating revenue and 75mln yuan of tax.

Taizhou Ruitong Metals Co., Ltd, located in Taizhou, Zhejiang Province, produced and sold nonferrous metals material, alloy and hardware.

**LAFARGE S.A. Copper Semis Company to be established in Ganzhou City**

Ganzhou Tungsten Industry Group LAFARGE S.A. Copper Semis Company was established in Ganzhou City on November 6 and the company introduced the advanced technology from Europe, sources from the company said.

The company was jointly invested by Spain LAFARGE S.A., Jiangxi Tungsten Industry Holdings Co., Ltd and Beijing Xiangteng Technology Information Co., Ltd. It mainly produces and sells copper, copper alloy and other copper materials for high-speed railway in Chinese and Asian market. The production scale of the company is 40kt of copper alloy per year. After it is commissioned, the company will realize 5bln yuan of sales income and 600mln yuan of tax each year.

LAFARGE S.A., starting out in 1833 as a limestone mining company, Lafarge transformed itself and now has a presence in 79 countries. The construction of the Suez Canal, the first laboratory for research into building materials, the first patents registered, the first foreign contracts...Discover the epic history of the Group in animation!

**Liangshan Mining's 100ktpy copper anode project to commission**

The construction of a 100ktpy copper anode project of Sichuan Liangshan Mining Co., Ltd (Liangshan Mining) will be finished by the end of 2009 and go into production in March 2010, sources from Yunnan Copper Co., Ltd (Yunnan Copper) said.

640mln yuan investment has been finished so far. Liangshan Mining's lion shareholder is Yunnan Copper, and it was founded in September 2001, focusing on the producing and selling of nonferrous metal concentrate.

**Zhangjiagang Lianhe Copper's 100ktpy copper anode project is launched**

Zhangjiagang Lianhe Copper Co., Ltd (Zhangjiagang Lianhe Copper) announced on October 24 that 100ktpy copper anode project is launched.

After the project is finished, it can recycle 110kt of copper scraps and produce 100kt of copper anode each year.

During October 2009, Zhangjiagang Lianhe Copper produced 18.6kt of copper anode and 17.5kt of refined copper.

The Zhangjiagang Lianhe Copper Industry Limited Company was established in 1996, it is controlled by Tongling Non-ferrous Metal Group Co., Ltd.

### **The recycling price of second-hand home appliance decreases**

The home appliances “traded in” policy has been implemented for three months. Recently the recycling price of home declined for the first time in line with the decrease of copper price since the policy was issued. It is reported that the price of home appliances decreased by 20yuan in Anhui Province.

The reason for the declining trend of the price of “traded in” home appliance was that the price of copper and iron decreased. The recycling price of second-hand home appliance decreased by 20% compared with half year ago. The workers of Hefei Industry Material Apparatus Recycling Co., Ltd said that the recycling price of old television was a few dozens of yuan, but the recycling of old washing machine was 60-100 yuan. The declining price of nonferrous metals had great effect on the recycling market, “traded in” activities on the market decreased due to the limited profits space.

### **PMI keeps rising in October**

Chinese Purchase Manager Index was 55.2% in October, edging up from 54.3 in September. It was the eighth straight consecutive month above 50, which demonstrates Chinese manufacture industry is resuming stably, according to figures from NBS.

Three indexes out of the PMI increased in October.

The production index was 59.3% in October, up by 1.3% m/m. Output of manufacturing industry has been on a rising trend. Seen from the sectors, the output of most sectors increased obviously against September, among which textile, fur feather manufacture industry, food processing and manufacturing industry, equipment manufacturing industry and non-metals product industry post rapid growth.

New orders index was 58.5%, up by 1.7% m/m. It demonstrates the demand for manufacturing product further rebounded. Chinese export order index also rose by 1.2% m/m to 54.5%, and it was the sixth straight consecutive month above 50.

Major raw material stock index was 49.0%, up by 1.1% m/m. It was still below the level of 50%. Purchase activities were affected by tension of railway transport and difficulties of capital flow.

The employment index was 52.4, down by 0.8% m/m. At the same time, the supplier delivery time index decreased a little to 50.7% in October.

### **MCC may bid for BHP**

China Metallurgical Group Corporation (MCC) is among the potential

|                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>Billiton nickel assets</b>                                         | <p>bidders for BHP Billiton's Ravensthorpe mine in West Australia, sources from Australian Financial review said.</p> <p>It is reported Chinese Jinchuan Group pulled out of a joint bid with Minara Resources last month with quality concerns. Minara Resources Ltd. may acquire the asset by itself or join with a foreign investor. It has been approached by a number of foreign companies eager to enter the bidding process.</p>                                                                       |
| <b>JNMC to restart Munali nickel mine in 2010</b>                     | <p>Chinese leading nickel producer Jinchuan Group Ltd (JNMC) will restart the Munali nickel mine in Zambia in early 2010, according to the Chinese ambassador to Zambia Li Qiang.</p> <p>JNMC took over the mine in September, holding 70% stake of the mine which was suspended operation due to low nickel price in March this year.</p>                                                                                                                                                                    |
| <b>Jien Nickel 15ktpy nickel project successfully commissioned</b>    | <p>Jilin Jien Nickel Industry Co., Ltd. (Jien Nickel, 600432 SH) 15ktpy nickel project successfully produced the first batch of nickel matte using AUSMLT smelting technology on November 12.</p> <p>The project was constructed by China No.15 Metallurgical Construction Co., Ltd. The AUSMLT furnace was introduced from Australia. It could save energy and is environment-friendly with high smelting ability. It is also the first time to use AUSMLT furnace for nickel smelting in China.</p>         |
| <b>CNR takes over NPI project in Lianyungang</b>                      | <p>China Nickel Resources Holding Co., Ltd (CNR, 02889.HK) finished the takeover of a nickel pig iron project on October 28 in Lianyungang, Jiangsu province, the company released announcement on October 30.</p> <p>The project is operated by Lianyungang Lijia Industrial Co., Ltd, and the company becomes the wholly owned subsidiary of CNR after the takeover. By the end of September 2009, the NPI Company had an asset of RMB 50 million yuan. The acquisition costs CNR RMB 196 million yuan.</p> |
| <b>Changjiang Nickel starts up FeNi project in Hubei</b>              | <p>Hubei Changjiang Nickel Co., Ltd signed a collaboration agreement in late October with the local government of Anlu City, Hubei province to construct a ferronickel project.</p> <p>At the beginning of November, construction of the project was started up. It will be built in two phases with total investment of 1.6bln yuan. It is designed to have a capacity of 80ktpy ferronickel after commissioning. The project will use pyrometallurgy technology for smelting.</p>                           |
| <b>US approves anti-dumping investigations on Chinese steel pipes</b> | <p>US Department of Commerce approved on October 30 that it would launch antidumping and anti-subsidy investigations on Chinese seamless steel pipes.</p> <p>The US Steel Corporation and the US Steelworkers Union and other enterprises requested to levy 98.37% antidumping duty on Chinese seamless steel pipes. They considered the unfair prices of Chinese seamless steel</p>                                                                                                                          |

pipes harmed the US steel industry. U.S. Department of Commerce also cited data that from 2006 to 2008, China seamless steel pipe export to US increased by 132%.

Seamless steel pipe is a kind of high value added product among steel pipes. China now has around 200 seamless steel pipe manufacturers. Economists believe that trade protectionism of the US government will affect the recovery of the global economy and harm the sound development of bilateral trade with China.

### **Tisco stainless steel products apply to Auto production**

Taiyuan Iron & Steel Co., Ltd (Tisco) developed high performance stainless steel and it is now widely used in production of Auto exhaust and other components. Most Auto parts producers choose Tisco's stainless steel product for production in China, sources from the market said.

Stainless steel material has many advantages in reducing the car emissions and body weight, saving energy consumption. Tisco has done many researches to develop stainless steel products using for Auto parts. Now it is able to make production in scale and supply to the world's top 3 exhaust producers.

### **Tsingshan Group to commission 2 SS tube lines**

Tsingshan Holding Group Co., Ltd plans to start trial operation of its two stainless steel tube production line in Shanghai in December, sources from the company said.

The new plant is in Fengxian County, 40km far from Shanghai City. It designed capacity is 1,000t/m of stainless steel seamless tube. The other line could produce 1000t stainless steel solder pipes each month at the starting and its capacity will be further expanded to 2000t/m. Tsingshan Group now has 1.1mln tpy of crude stainless steel capacity currently.

## **Statistics**

## Market Data

### Copper and Nickel Price on Chinese Spot Market

| Refined Copper (1#) (Unit: yuan/tonne, tax included) |                 |                 |                 |                 |
|------------------------------------------------------|-----------------|-----------------|-----------------|-----------------|
|                                                      | Nov.2           | Low             | High            | Nov. 30         |
| Nanhai                                               | 50,200/50,400   | 50,200/50,400   | 54,400/54,600   | 54,100/54,300   |
| Huatong                                              | 50,250/50,350   | 50,250/50,350   | 54,350/54,540   | 54,100/54,200   |
| Changjiang                                           | 50,100/50,500   | 50,100/50,500   | 54,250/54,600   | 54,000/54,150   |
| Refined Nickel (1#)                                  |                 |                 |                 |                 |
|                                                      | Nov.2           | Low             | High            | Nov. 30         |
| Huatong                                              | 130,000/131,500 | 125,000/126,000 | 130,000/131,500 | 125,500/126,500 |
| Changjiang                                           | 130,500/132,000 | 125,500/126,500 | 130,500/132,000 | 126,000/127,000 |

Notes: 1. Guangzhou Nanhai Nonferrous Metals Spot Market (Guangzhou) is located in Guangdong Province, South China. Both Changjiang Nonferrous Metals Spot Market (Changjiang) and Huatong Nonferrous Metals Spot Wholesale Market (Huatong) are located in Shanghai City, East China.

2. 0#, 1# and 2# all mean refined metal, referred as GB in China. The date when the copper prices hit the high or low on Nanhai, Huatong and Changjiang May be different.
